1.Important information in the manual

1.1 Scope

The installation and operation manual applies to the modular battery energy storage system. Please carefully read this installation and operation manual to ensure the safe installation, preliminary debugging, and maintenance of BOS-B. Installation, preliminary debugging, and maintenance must be carried out by qualified and authorized personnel. Please keep this installation and operation manual and other applicable documents near the battery energy storage system, so that all personnel involved in installation or maintenance can access this installation and operation manual at any time.

This installation and operation manual only applies to countries meeting the certification requirements. Please observe the applicable local laws, regulations, and standards. Standards and legal provisions of other countries may be inconsistent with the provisions and specifications in this manual. In this case, please contact our after-sales service personnel, hotline: +86 0574 8612 0560, email: service-ess@deye.com.cn.

1.2 Description of BOS-B

| Model | System energy (kWh) | Rated DC power (kW) | Discharge depth | Composition |
|----------|---------------------|---------------------|-----------------|----------------------------------|
| BOS-B70 | 71.5 | 43 | 90% | BOS-B-Pack14.3*5+BOS-B-PDU-2 *1 |
| BOS-B85 | 85.8 | 51.61 | 90% | BOS-B-Pack14.3*6+BOS-B-PDU-2 *1 |
| BOS-B100 | 100.1 | 60.21 | 90% | BOS-B-Pack14.3*7+BOS-B-PDU-2 *1 |
| BOS-B110 | 114.4 | 68.81 | 90% | BOS-B-Pack14.3*8+BOS-B-PDU-2 *1 |
| BOS-B125 | 128.7 | 77.41 | 90% | BOS-B-Pack14.3*9+BOS-B-PDU-2 *1 |
| BOS-B140 | 143 | 86.02 | 90% | BOS-B-Pack14.3*10+BOS-B-PDU-2 *1 |
| BOS-B155 | 157.3 | 94.62 | 90% | BOS-B-Pack14.3*11+BOS-B-PDU-2 *1 |
| BOS-B170 | 171.6 | 103.22 | 90% | BOS-B-Pack14.3*12+BOS-B-PDU-2 *1 |
| BOS-B185 | 185.9 | 111.82 | 90% | BOS-B-Pack14.3*13+BOS-B-PDU-2 *1 |
| BOS-B200 | 200.2 | 120.42 | 90% | BOS-B-Pack14.3*14+BOS-B-PDU-2 *1 |
| BOS-B215 | 214.5 | 129.02 | 90% | BOS-B-Pack14.3*15+BOS-B-PDU-2 *1 |

1.3 Meaning of Symbols

This manual contains the following types of warnings:

Danger! It may cause an electric shock.

Even when the equipment is disconnected from the power grid, the voltage-free state will have a time lag.

Danger! If the instructions are not observed, death or severe injury may occur.

Warning! If the instructions are not observed, a loss may occur.

Attention! This symbol represents information on the device use.

Symbols on equipment:

The following types of warning, prohibition, and mandatory symbols are also used on the equipment.

Attention! The risk of chemical burns

If the battery is damaged or fails, it may lead to electrolyte leakage, which in turn causes the formation of a small amount of hydrofluoric acid, among other effects. Contact with these liquids can cause chemical burns.

- Do not subject the battery module to severe impact.
- Do not open, disassemble or mechanically change the battery module.
- In case of contact with an electrolyte, wash the affected area with clean water immediately and seek medical advice promptly.

Attention! The risk of explosion

Incorrect operation or fire may cause the lithium-ion battery unit to ignite or explode, leading to serious injury.

- Do not install or operate the battery module in explosive or high-humidity areas.

- Store the battery module in a dry place within the temperature range specified in the data sheet.
- Do not open, drill through or drop the battery cell or module.
- Do not expose the battery cell or module to high temperatures.
- Do not throw the battery cell or module into the fire.
- When the lithium battery catches fire after being plugged in with AC power, unplug the power supply first to prevent electric shock during fire fighting.
- If there is an open flame, use carbon dioxide or ABC dry powder fire extinguisher to put out the fire, and then cool down by using the nearby fire hydrant or pouring water until no white smoke appears and the battery is completely cooled down. After extinguishing the fire, continue to monitor the battery for at least 1 hour to prevent re-ignition.
- If there is no open flame but a large amount of white smoke comes out of the battery, it is recommended to use a 6L portable water-based fire extinguisher (if any), and then cool down by using the nearby fire hydrant or pouring water until no white smoke appears and the battery is completely cooled down. After extinguishing the fire, continue to monitor the battery for at least 1 hour to prevent re-ignition.
- Do not use defective or damaged battery modules.

Caution! Hot surface

- If a malfunction occurs, the parts will become very hot, and touching them may cause serious injury.
- If the energy storage system is defective, please shut it down immediately.
- If the fault or defect becomes obvious, special care should be taken when handling the equipment.

No open fire! It is prohibited to handle open flames and ignition sources near the energy storage system.

Do not insert any objects into the opening in the housing of the energy storage system!

No objects, such as screwdrivers, may be inserted through openings in the casing of the storage system.

Wear safety goggles! Wear safety goggles when working on the equipment.

Follow the manual! When working and operating the equipment, the installation and operation manual provisions must be observed.

1.4 General Safety Information

Danger! Failure to comply with the safety information can lead to life-threatening situations.

1. Improper use can cause death. Operators of BOS-B must read this manual and observe all safety information.
2. Operators of BOS-B must comply with the specifications in this manual.
3. This manual cannot describe all conceivable situations. For this reason, applicable standards and relevant occupational health and safety regulations are always given priority.
4. In addition, the installation may involve residual hazards in the following circumstances:
 - Incorrect installation.
 - The installation is carried out by personnel who did not receive relevant training or guidance.
 - Failure to observe the warnings and safety information in this manual.

If there are any questions, please contact Deye after service.

1.5 Disclaimer

DEYE ESS TECHNOLOGY CO., LTD shall not be liable for personal injury, property loss, product damage and subsequent losses under the following circumstances.

- Failure to comply with the provisions of this manual.

- Incorrect use of this product.
- Unauthorized or unqualified personnel repair the product, disassembly the rack and perform other operations.
- Use of unapproved spare parts.
- Unauthorized modifications or technical changes to the product.

1.6 Installation environment

- The battery energy storage system can only be installed and operated in an enclosed space. The working environment temperature range of BOS-B is $-20^{\circ}\text{C} \sim 55^{\circ}\text{C}$, and the maximum humidity is 85%. The battery module shall not be exposed to the sun or placed directly beside the heat source.
- The battery module shall not be exposed to a corrosive environment.
- When installing the battery energy storage system, ensure that it stands on a sufficiently dry and flat surface with sufficient bearing capacity. Without the manufacturer's written approval, the installation site's altitude shall not be higher than 3,000 meters. The output power of the battery decreases with the altitude.
- In areas where flooding may occur, care must be taken to ensure that the battery module is installed at a suitable height and to prevent its contact with water.
- The battery energy storage system must be installed in a fireproof room. This room must have no fire source and must be equipped with an independent fire alarm device, which complies with local applicable regulations and standards. According to local applicable regulations and standards, the room must be separated by the T60 fire door. Similar fire-proof requirements apply to other openings in the room (such as windows).

Compliance with the specifications in this manual is also part of proper use.

The use of the BOS-B system is prohibited in the following circumstances:

- Mobile use on land or in the air (use on water only with the manufacturer's consent and with the manufacturer's written consent).

- Used in medical devices.
- Used as a UPS system.

Minimum product installation distance

The minimum distance to the surrounding building when the battery is installed is 100mm, and the minimum distance between the two products is 100mm.

1.7 Quality Certificate

The quality certificate can be downloaded from www.deyeess.com.

1.8 Requirements for Installation Personnel

All work shall comply with local applicable regulations and standards.

The installation of BOS-B can only be completed by electricians with the following qualifications:

- Trained in dealing with hazards and risks associated with the installation and operation of electrical equipment, systems, and batteries.
- Trained on installation and debugging of electrical equipment.
- Understanding and complying with the technical connection conditions, standards, guidelines, regulations, and laws applicable.
- Knowledge of handling lithium-ion batteries (transportation, storage, disposal, hazard source).
- Understanding and complying with this document and other applicable documents.

2. Safety

2.1 Safety rules

To avoid property damage and personal injury, the following rules shall be followed when working on the hazardous live parts of the battery energy storage system:

- It is available for use.
- Ensure that it will not restart.
- Make sure there is no voltage.
- Grounding protection and short circuit protection
- Cover or shield adjacent live parts.

2.2 Safety information

Part damage or short circuit may cause electric shock and death. A short circuit can be caused by connecting battery terminals, resulting in current flow. This type of short circuit shall be avoided under any circumstances. For this reason, follow these instructions:

- Use insulated tools and gloves.
- Do not put any tools or metal parts on the battery module or high-voltage control box.
- When operating the battery, be sure to remove watches, rings, and other metal objects.
- Do not install or operate this system in explosive or high-humidity areas.
- When working on the energy storage system, first turn off the charging controller, then the battery, and ensure that they are not turned on again.

Improper use of the battery energy storage system can lead to death. The use of the battery energy storage system beyond its intended use is not allowed, because it may cause great danger.

Improper handling of the battery energy storage system can cause life-threatening risks, serious injury or even death.

Warning! Improper use can cause damage to the battery cell.

- Do not expose the battery module to rain or soak it in liquid.

- Do not expose the battery module to a corrosive environment (such as ammonia and salt).
- The battery energy storage system shall be debugged no later than six months after delivery.

3. Transport to the end customers

3.1 Provisions on Shipping of Battery Modules:

It is necessary to comply with the relevant regulations and provisions on roads for shipping lithium-ion products in the corresponding countries.

It is prohibited to smoke in the vehicle during transportation or in the vicinity during loading and unloading.

The dangerous goods transport vehicles shall meet relevant regulations concerning road transportation and shall be equipped with two tested CO₂ fire extinguishers.

It is forbidden for the freight forwarder to open the outer package of the battery module. Use only approved lifting equipment to move the battery cabinet system. Use only the hanging lug on the top of the battery cabinet as the connection point. When lifting, the angle of the sling must be at least 60°.

Improper vehicle transportation can cause injury. Improper transportation or improper transportation locks may cause the load to slip or overturn, resulting in injury. The cabinet shall be placed vertically to prevent it from sliding in the vehicle, and a fixing belt shall be used.

A tilting of the battery rack may cause injury. The maximum weight of a battery rack of BOS-B can reach 1850 kg. When tilted, they may overturn, causing injury and damage. Ensure that the battery cabinet is on a stable surface and that it does not tilt due to load or force.

The battery energy storage system can be damaged, if not properly transported. The battery module can only be transported vertically. Note that these parts may be top-heavy. Failure to follow this instruction may result in damage to the part.

During transportation, the battery storage rack may be damaged when it is installed with the battery module. The battery storage rack is not designed to be transported with the installed battery modules. Always transport the battery module and the battery rack separately. Once the battery module is installed, do not move the battery rack, and do not lift it by a lifting device.

If possible, do not remove the transport packaging before arrival at the installation site. Before removing the transport protector, check if the transport packaging is damaged, and check the impact indicator on the outer packaging of the battery converter. If the impact indicator is triggered, the possibility of transport damage cannot be ruled out.

Improper transportation of battery modules may cause injury. The single battery module weighs 123 kg. If it falls or slips, it may cause injury. Only use suitable transport and lifting equipment to ensure safe transport.

Wear safety shoes to avoid the danger of injury. When transporting the battery rack and battery module, their parts may be crushed due to their heavy weight. Therefore, all persons involved in transportation must wear safety shoes with toe caps. Please observe the safety regulations for transportation at the end customer's site, especially during loading and unloading.

During transportation and installation of unpacked battery storage cabinets, the risk of injury increases, especially on sharp metal panels. Therefore, all personnel involved in transportation and installation must wear protective gloves.

The maximum weight of a single rack of BOS-B can reach 550 kg. We suggest that at least 4 people work together to install the battery rack. The lifting device is helpful for heavy parts, and the pulley or cart for light parts. Be careful not to damage the case. The number of battery modules stacked shall not be more than 4.

Check whether the delivery is complete.

3.2 Storage Position of the battery packaging module

The battery module can only be transported in an upright position. Please note that the battery rack may be very top-heavy.

4. Description and installation of BOS-B battery

4.1 Installation Precautions

WARNING! Possible damage to the building due to static overload

- 1.The total weight of the battery storage system is 1850kg. Ensure that the installation site has sufficient bearing capacity.
- 2.When selecting the installation site, consider the transportation route and necessary site cleanup.

4.2 BOS-B Product Description

BOS-B is a high-voltage lithium-ion battery system. It provides a reliable backup power supply for supermarkets, banks, schools, farms and small factories to smooth the load curve and achieve peak load transfer. It can also improve the stability of renewable systems and promote the application of renewable energy.

It is characterized by high integration, good reliability, long service life, wide working temperature range, etc. The battery energy storage system is modular. Each battery module has a capacity of

14.3 kWh. It can support up to 15 battery modules in series. Its total energy can be expanded from 71.5(5×14.3) kWh to 214.5(15×14.3) kWh.

4.3 Technical Data

| Main Parameter | | |
|---|-----------|----------------------|
| Battery Type | | BOS-B215 |
| Battery Module Energy (kWh) | | 14.3 |
| Battery Module Nominal Voltage (V) | | 51.2 |
| Battery Module Capacity (Ah) | | 280 |
| Module Weight Approximate (kg) | | 122 |
| Battery Module Qty In Series (Optional) | | 15 |
| Scalability | | 5 ~ 15 |
| System Nominal Voltage (V) | | 768 |
| System Energy (kWh) | | 214.5 |
| System Usable Energy (kWh) | | 193.05 |
| Charge/Discharge | Recommend | 140 |
| Current (A) | Max | 168 |
| Other Parameter | | |
| Operating Temperature (°C) | | discharge : -20 ~ 55 |

| | |
|------------------------------------|--|
| | charge : 0 ~ 55 |
| Storage Temperature (°C) | 0 ~ 35 |
| Thermal Management | Smart fan cooling |
| LCD Display | SOC / Fault Code |
| Status Indicator | Yellow : Battery High Voltage Power On Red : Battery System Alarm |
| Communication Port | TCP / RS485 / CAN |
| Communication With BMS | CAN |
| Humidity | 5% ~ 85% |
| Altitude | ≤3000m |
| IP Rating of Enclosure | IP20 |
| Noise (dB) | 65 |
| System Dimension (W × H × D, mm) | 2150 × 1136 × 800 |
| System Weight Approximate (kg) | 1850 |
| Installation Location | Rack Mounted |
| Recommend Depth of Discharge | 90% |
| Cycle Life | 25±2°C, 0.5C / 0.5C, EOL70%≥6000 |
| Warranty Period | 10 years |
| Certification | CE / IEC62619 / IEC62040 / UN38.3 |

4.4 Preparation

4.4.1 Tools required

Please prepare No. 8 socket, No. 10 socket and cutting pliers for fastening screws on the side of the cluster holder to lock the power line.

4.5 Description of Battery Module

| No. | Name | Description |
|-----|-------|---|
| ① | B+ | Battery module positive pole (orange) |
| ② | COMM2 | Connection position of battery module communication and power supply output |
| ③ | B- | Battery module negative pole (black) |
| ④ | Fan | Ventilation and heat dissipation. |
| ⑤ | COMM1 | Connection position of battery module communication and power supply input |

4.6 Description of High-Voltage Control Box

| No. | Name | Description |
|-----|----------------------|---|
| ① | Ethernet | Features not yet developed. |
| ② | PCS COM | PCS COM battery communication terminal: used to output battery information to the inverter. |
| ③ | IN COM | Connection position with previous BOS-B-PDU-2 communication input. |
| ④ | OUT COM | Connection position with next BOS-B-PDU-2 communication output. |
| ⑤ | Air switch | It is used to manually control the connection between the battery rack and external devices. |
| ⑥ | COMM3 | The product must be connected to the auxiliary power input AC200~240V-3A-50~60Hz when used. |
| ⑦ | COMM1 | Emergency power-off triggered the interface. |
| ⑧ | COMM2 | Communicative connection with the first battery module; and providing 12VDC power for the first battery module. |
| ⑨ | Bluetooth | The mobile APP connects to the data acquisition rod of the energy storage system. |
| ⑩ | B+ | Battery common positive connection position (red). |
| ⑪ | B- | Battery common negative connection position (black). |
| ⑫ | Display screen | Display SOC and fault codes. |
| ⑬ | START | A start switch of 12VDC power inside the high-voltage control box. |
| ⑭ | HV light indicator | High-voltage hazard indicator (yellow). |
| ⑮ | ALRM light indicator | Battery system fault alarm indicator (red)Y. |
| ⑯ | PCS1+ | First PCS positive connection position (orange). |

| | | |
|---|-------|--|
| ⑰ | PCS2+ | Second PCS positive terminal connection position (orange). |
| ⑱ | PCS1- | First PCS negative connection position (black). |
| ⑲ | PCS2- | Second PCS negative connection position (black). |
| ⑳ | USB | BMS upgrade port and storage expansion port. |

4.7 Description of Battery Module in Rack

4.7.1 Battery Pack

| No. | Description | | quantity |
|-----|--|----------|----------|
| ① | 14.3kWh battery module (general) | Standard | 1 |
| ② | Communication cable) CAT5E FTP 24AWG black | Standard | 1 |
| ③ | Copper bar | Standard | 1 |
| ④ | Screw | Standard | 4 |

4.7.2 High Voltage Control Box

| No. | Description | | quantity |
|-----|-------------------------------------|----------|----------|
| ① | High-voltage control box 1000V/168A | Standard | 1 |

| | | | |
|---|-------|----------|---|
| ② | Screw | Standard | 4 |
|---|-------|----------|---|

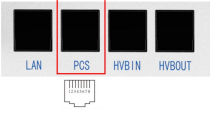

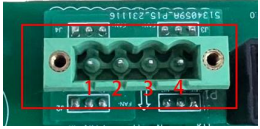

4.7.3 Accessory Bag

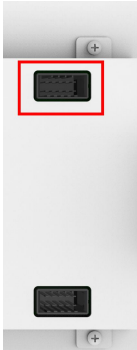

| No. | Description | | quantity |
|-----|-------------|--|----------|
|-----|-------------|--|----------|

4.8 Assembly process

Note: At least 4 installers are required to install the product.

1. Twist the base and the four cups together and place them on the ground to level.

2. Stack four battery packs from bottom to top.

3. Cover top and bottom.

4. After the first battery rack is installed, install the second battery rack 1 meter away from the first battery rack. After the installation, use a forklift to start from the right side of the battery pack and place the second battery rack on the right side of the first battery rack. The middle distance between the two thick battery racks should not be less than 100 mm.

5. Repeat the preceding steps for the third battery rack and the fourth battery rack.

Note: Please cut the corresponding gap according to the wiring harness placement needs.

Connect cables correctly according to the figure.

4.9 Installation of the Battery Module to the Rack

Insufficient or no grounding may cause an electric shock. Device malfunctions, and insufficient or no grounding may cause device damage and life-threatening electric shocks.

Note: Before installing the battery, please turn the manual switch of the high-voltage control box to the off position.

CAUTION

Remember that this battery is heavy! Please be careful when lifting out from the package.

4.9.1 Cable connection

1. Grounding description

Connect one end of the ground cable to the cluster rack and the other end to the ground bar at the installation site.

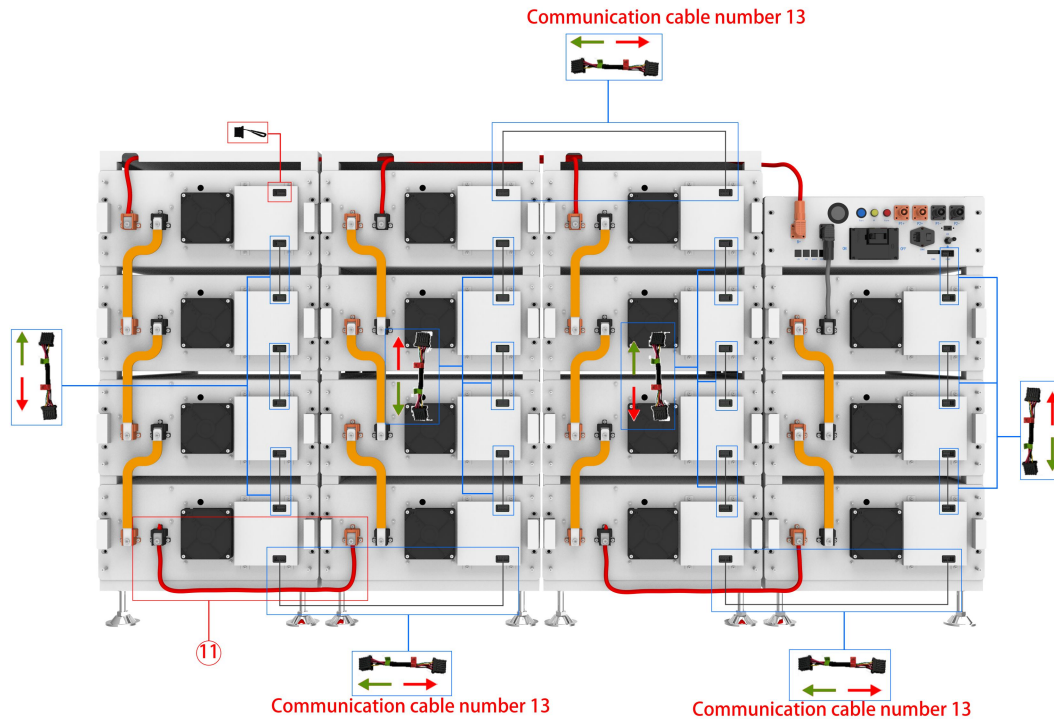

4.9.2 Battery installation cable Description

When connecting cables, observe the installation diagram and pay attention to the direction of the communication cables. Otherwise, the products may not work properly due to incorrect cable installation.

When connecting copper wire with high voltage, must be electrical professional operators with insulation gloves before operation.

- Between the battery pack B+ and B- connect with the No. ③ cable in the battery pack.
- Control box Connect B+ to battery pack B+ using cable ⑤ in the accessory bag.
- The connection between the high voltage box and the battery pack is 250MM cable in No. ④, and the connection between the battery pack and the battery pack is 160mm cable in No. ④ in the accessory bag.
- The ground cable between the high voltage box and the battery and between the battery and the battery is the No. ⑮ ground cable.

- The communication cable connecting one cluster battery rack to another cluster battery rack is the ⑬ communication cable in the accessory bag.
- The power cable between a battery cluster and a battery cluster is the ⑪ cable.

4.10 Battery cluster connected to inverter

For the Australian Market, an over-current protection and isolation device that isolates both positive and negative conductors simultaneously is required between the battery system and inverter.

Battery cluster connected to inverter

Notice: The length of the communication line between the inverter and the battery should not exceed 30m.

Single battery cluster connected to inverter

Two battery clusters connected to the inverter

Three battery clusters connected to the inverter

4.11 System startup and shutdown

Startup procedure

- 1) After connecting the battery cables, press the air switch button on the high-voltage control box to turn OFF to ON.
- 2) Press the start button and wait for the screen to light up.
- 3) Complete boot

Shutdown procedure

- 1) Press the start button again and wait for the screen to go off.
- 2) Press the air switch button ON the high voltage control box and set the "ON" to the "OFF" position.
- 3) Complete shutdown

Description of external circuit breakers between inverter and battery system

Turn on the circuit breaker and then start the battery pack.

Turn off the circuit breaker after the battery pack is closed.

4.12 How to use local mode with BOS-B (Battery)?

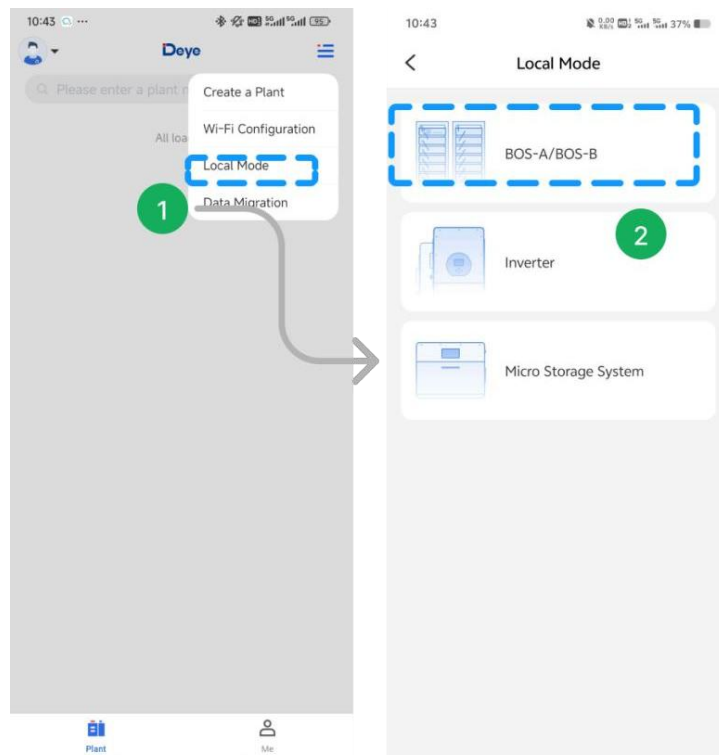

Scan QR code and download the Bluetooth APP. After downloading the APP, please follow the steps below to complete the operation.

Note: The procedure on APP for controlling BOS-A is similar to that for BOS-B. The following steps take BOS-A as a example.

Step 1: Log into the APP and select “Local Mode” .

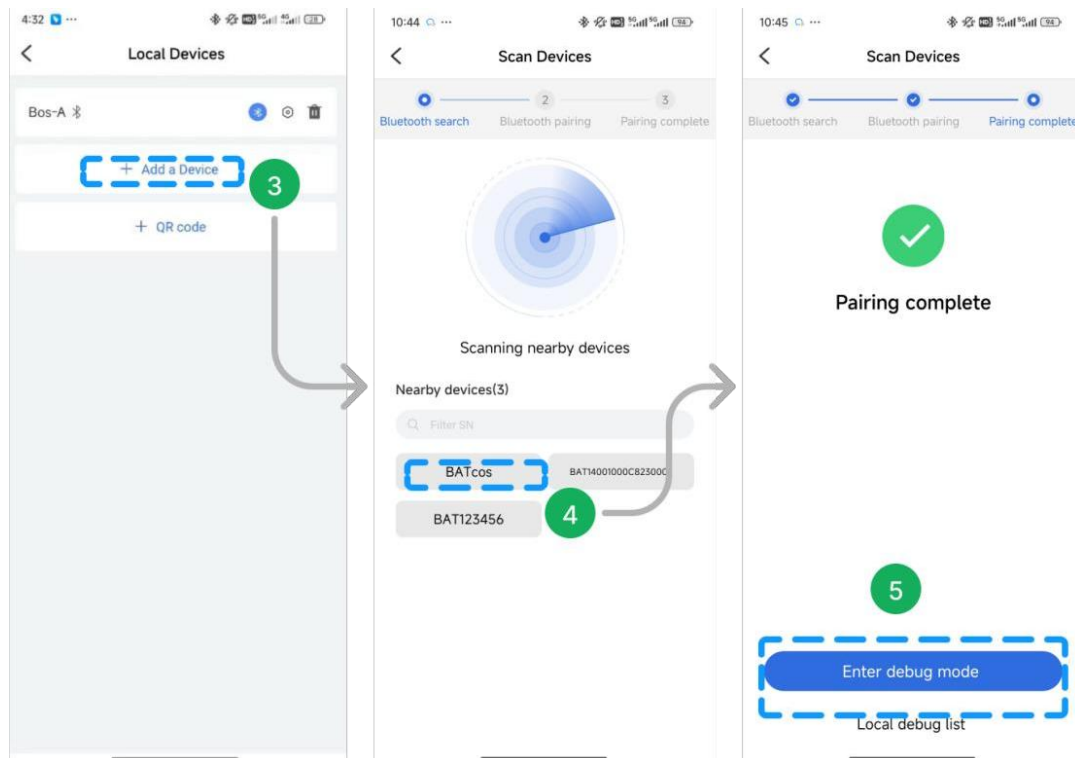

Step 2: Select the device type —— Battery.

Step 3: Tap on “Add a Device”.

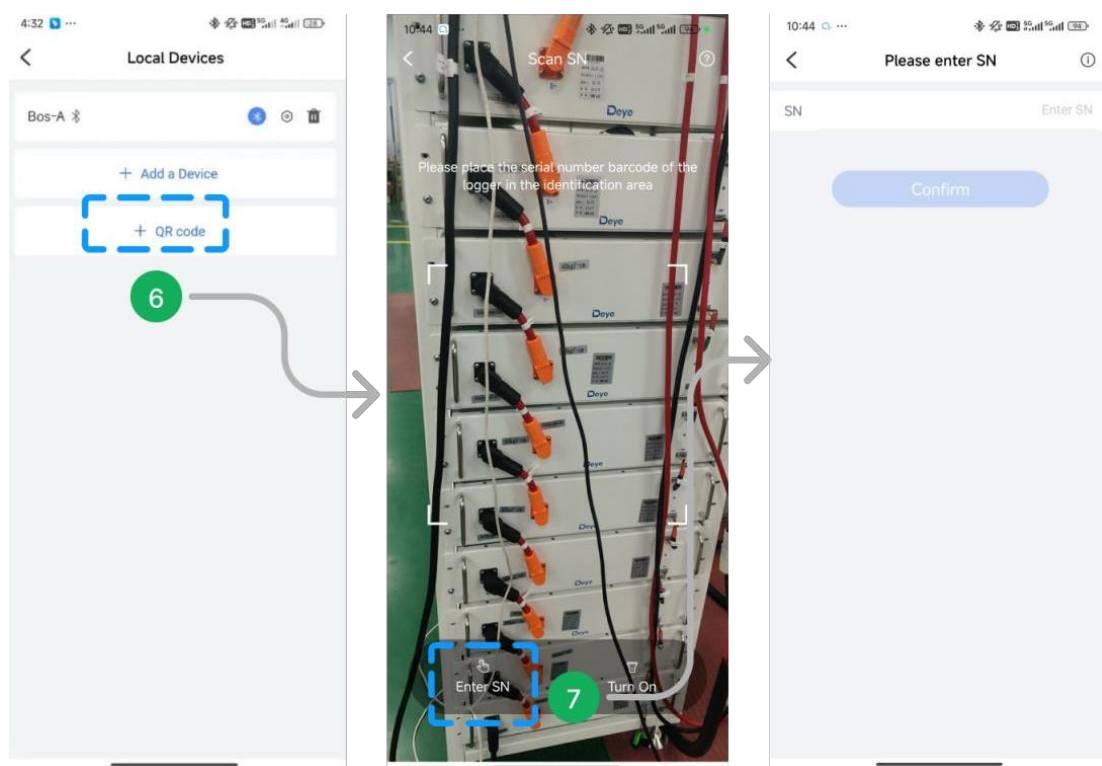

Step 4: Searching for nearby device via Bluetooth, tap on the device for Local Mode.

Step 5: Pairing complete, tap on “Enter debug mode” to view its’ data.

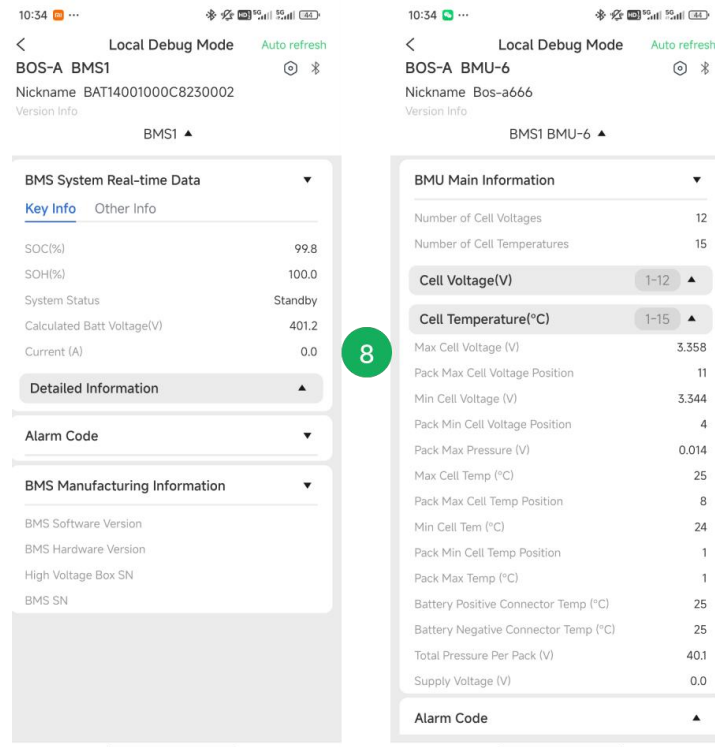

Step 6: Except the Bluetooth Mode, Adding SN support Scan QR code.

Step 7: User could also tap on “Enter SN”to add SN.

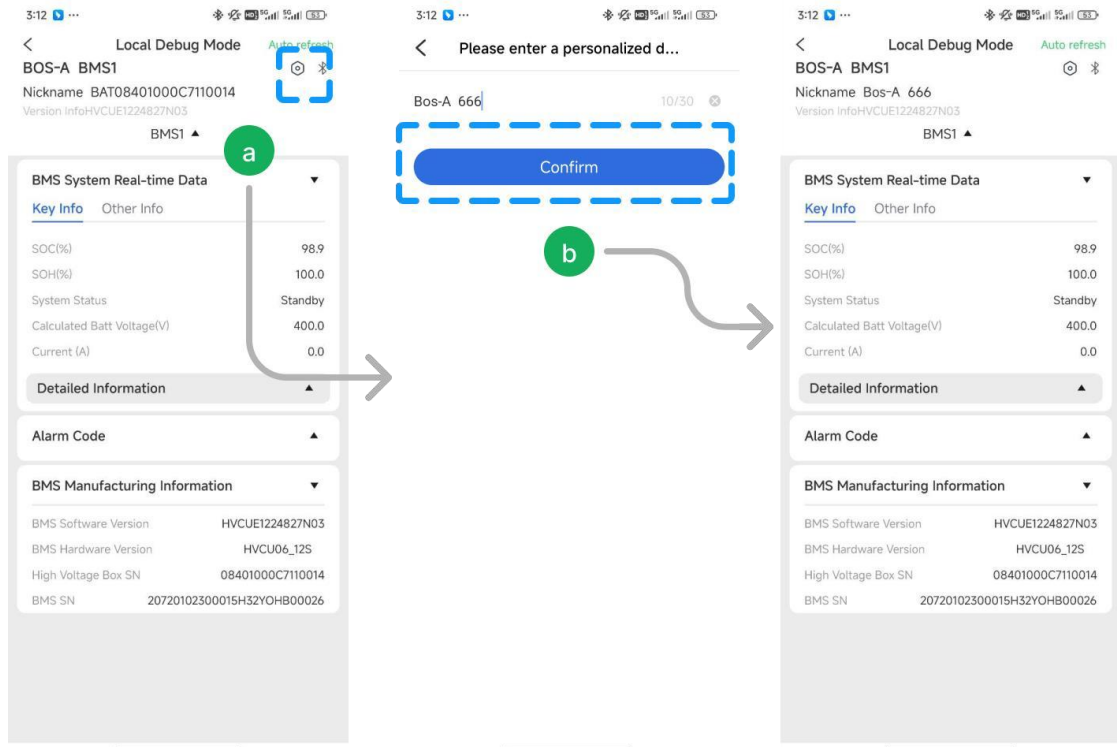

Step 8: Detailed information of the battery could be viewed in the Local Mode, such as BMS, Alarm and BMU etc.

How to personalize the BOS-B name?

Step a: Tap on the upper right corner can edit Nickname.

Step b: Enter the new name and tap on “Confirm”. The interface will display the changed name

5. BOS-B' fault description

Different types of faults are below:

| System faults | Fault types | Trigger conditions |
|---------------|-----------------------------------|--|
| | Charge over-current alarm | Exceeding the parameter set value and set time (More than 168A, 2min; more than 200A, 5s; more than 224A, 2s) |
| | Charge over-current protection | |
| | Discharge over-current alarm | |
| | Discharge over-current protection | |
| | Charge overtemperature alarm | Exceeding the parameter set value and set time ($>50^{\circ}\text{C}$, 2s) |
| | Charge overtemperature protection | Exceeding the parameter set value and set time ($>60^{\circ}\text{C}$, 2s) |
| | Discharge | Exceeding the parameter set value and set time |

| | | |
|--|--|--|
| | overtemperature alarm | (>50°C, 2s) |
| | Discharge overtemperature protection | Exceeding the parameter set value and set time (>60°C, 2s) |
| | Charge under temperature alarm | Exceeding the parameter set value and set time (<5°C, 2s) |
| | Charge under temperature protection | Exceeding the parameter set value and set time (<0°C, 2s) |
| | Discharge under temperature alarm | Exceeding the parameter set value and set time (<-10°C, 2s) |
| | Discharge under temperature protection | Exceeding the parameter set value and set time (<-20 °C, 2s) |
| | Excessive differential voltage alarm | Exceeding the parameter set value and set time (>500mv, 2s) |
| | Excessive differential voltage protection | Exceeding the parameter set value and set time (>800mv, 2s) |
| | Excessive differential temperature alarm | Exceeding the parameter set value and set time (>10°C, 2s) |
| | Excessive differential temperature protection | Exceeding the parameter set value and set time (>15°C, 2s) |
| | Cell overvoltage alarm | To maintain consistency, cut off the charging immediately when the full charge calibration rated voltage of 3.6V is reached. When the voltage drops to 3.35V, restart it with the turned-off red light indicator. All protective red light indicators are always on! |
| | Cell overvoltage protection | |
| | Cell undervoltage alarm | |
| | Cell undervoltage protection | |
| | Pre-charge resistor overtemperature alarm | Exceeding the parameter set value and set time (>55°C, 2s) |
| | Pre-charge resistor overtemperature protection | Exceeding the parameter set value and set time (>85°C, 2s) |
| | Insulation level 1 | Exceeding the parameter set value and set time |
| | Insulation level 2 | Exceeding the parameter set value and set time |
| | BMS connector | Exceeding the parameter set value and set time |

| | | |
|--|--|--|
| | overtemperature alarm | |
| | BMS connector overtemperature protection | Exceeding the parameter set value and set time |
| | BMU connector overtemperature alarm | Exceeding the parameter set value and set time |
| | BMU connector overtemperature protection | Exceeding the parameter set value and set time |
| | Power loop overtemperature alarm | Exceeding the parameter set value and set time |
| | Power loop overtemperature protection | Exceeding the parameter set value and set time |
| | SOC too low | Exceeding the parameter set value and set time |
| | Total voltage too high alarm | Exceeding the parameter set value and set time |
| | Total voltage too high protection | Exceeding the parameter set value and set time |
| | Total voltage too low alarm | Exceeding the parameter set value and set time |
| | Total voltage too low protection | Exceeding the parameter set value and set time |
| | Discharge relay adhesion | Relay feedback information state adhesion |
| | Charge relay adhesion | Relay feedback information state adhesion |
| | Heating relay adhesion | High voltage is detected after disconnecting the heating relay |
| | Limit protection | Exceeding the parameter set value and set time |
| | Abnormal power supply voltage | Exceeding the parameter set value and set time |
| | Master positive relay adhesion | Relay feedback information state adhesion |
| | Fuse Blown | No high voltage is detected after the loop relay is closed |
| | Repeated BMU address fault | BMU with the same number |

| | | |
|--|--|---|
| | INTER-CAN BUS communication failure | Loss of communication between BMS |
| | PCS-CAN BUS communication failure | The heartbeat message of the inverter is not received for a long time |
| | RS485 communication failure | Inverter RS485 access is not received for a long time |
| | Internal total voltage acquisition fault | The difference between the acquired internal total voltage and the accumulated internal total voltage exceeding the set value |
| | Cell voltage acquisition fault | The cell voltage acquired is 0 |
| | Temperature acquisition failure | The temperature acquired is -40℃ |
| | EEPROM storage failure | EEPROM write failure during self-test |
| | RTC clock fault | The external RTC failed to enable the charging function |
| | Pre-charge failure | Pre-charge timeout |
| | Charging voltage too low | The minimum cell voltage is lower than the set value |
| | BMU lost | BMU message not received for a long time |
| | Abnormal number of BMU | The number of BMU addresses is different from the number of set parameters |

6.BOS-B screen displays the logic

1. After startup, the screen is on for 20 seconds and then off. Each time the touch screen is lit behind the scenes for 20 seconds, and then turned off until the next touch.
2. The first 2s of boot, the screen shows all.
3. The fault code starts from F001 in ascending order.
4. Each fault is displayed for 5s, and then switch to the next fault.
5. If all faults are rectified, keep the previous fault on the screen for 5 seconds and clear the screen.

| F050 | ALARM_ID_MBMS_NTC_BREAKLINE_ERROR | Temperature collection of the BMS connector is abnormal |
| F051 | ALARM_ID_BMU_NTC_BREAKLINE_ERROR | The temperature collection of the BMU connector is abnormal |
| F052 | ALARM_ID_PACK_THERMAL_RUNAWAY | PACK thermal runaway fault |
| F053 | ALARM_ID_PACK_FIRE_FAULT | PACK fire failure |
| F054 | ALARM_ID_TCP_CONNECT_FAIL | TCP connection failure |
| F055 | ALARM_ID_W5500_SPI_COMM_FAIL | The W5500SPI communication fails |
| F056 | ALARM_ID_LC_COMM_LOST | LC communication loss |
| F057 | ALARM_ID_PACK_AFE_COMM_ERROR, | BMU AFE communication fails |
| F058 | ALARM_ID_BLE_INIT_FAULT | Description Bluetooth initialization failed |
| F059 | ALARM_ID_CELL_TYPE_MISMATCH_ERROR | The battery type does not match |

Note: For more information, please contact us. Email: service-ess@deye.com.cn, Service Hotline: +86 0574 8612 0560.

7. Maintenance and upgrade

Warning! Improper decommissioning may cause damage to the equipment and/or battery inverter.

Before maintenance, ensure that BOS-B is decommissioned according to relevant provisions.

Note: All maintenance work shall comply with local applicable regulations and standards.

The USB disk port of BOS-B has the functions of upgrading firmware and recording battery data, which can be used as an auxiliary tool.

7.1 Maintenance of BOS-B

To ensure safe operation, all plug connections must be checked. If necessary, relevant operators shall press them back into place at least once a year.

The following inspection or maintenance must be carried out once a year:

- General visual inspection
- Check all tightened electrical connections. Check the tightening torque according to the values in the following table. Loose connections must be retightened to the specified torque.

| Connection mode | Tightening torque |
|--|-------------------|
| High-voltage control box grounding | 4.5Nm |
| Fixing the lug of the high-voltage control box | 1.2Nm |
| Fixing the lug of the battery module | 1.2Nm |

- Using the monitoring software, check whether the SoC, SoH, battery voltage and temperature of the battery module are abnormal.
- Shut down and restart BOS-B once a year.

Note: If the system is installed in a polluted environment, maintenance and cleaning must be carried out at short intervals.

Note: Clean the battery rack with a dry-cleaning cloth. Ensure that no moisture comes into contact with the battery connections. Do not use solvents.

7. Battery Module Storage

- A. To ensure the battery service life, the storage temperature shall be kept between 0°C~35°C.
- B. The battery shall be cycled at least once every 6 months.
- C. To minimize self-discharge in a long storage period, disconnect the battery connection of the high-voltage control box of the DC connecting cable. This will interrupt the use of the 12 V power supply installed in the high-voltage control box and prevent the battery from self-discharging.

8. Disposal

For details related to the disposal of battery modules, please contact us. Service Hotline: +86 0574 8612 0560, Email: service-ess@deye.com.cn. For more information, please visit <http://deyeess.com>.

Observe applicable regulations on waste battery disposal. Immediately stop the use of damaged batteries. Please contact your installer or sales partner before disposal. Ensure that the battery is not exposed to moisture or direct sunlight.

Attention:

1. Do not dispose of batteries and rechargeable batteries as domestic waste!

You are legally obliged to return used batteries and rechargeable batteries.

2. Waste batteries may contain pollutants that can damage the environment or your health if improperly stored or handled.

3. Batteries also contain iron, lithium and other important raw materials, which can be recycled.

For more information, please visit <http://www.deyeess.com>. Do not dispose of batteries as household waste!
